

You Can Stop The Haze

Biochar: The Sustainable Solution to Haze

The Warm Heart **Biochar Project** offers a sustainable solution to the haze by providing resources for farmers to convert crop residues into biochar.

♥ What Is Biochar?

Biochar is super charcoal (pure carbon) that can be made from field waste. Added to soil it cools the globe and restores the earth.

♥ Why Make Biochar?

Making biochar instead of field burning agricultural wastes...

- ♥ Eliminates smoke and improves public health
- ♥ Eliminates greenhouse gases
- ♥ Creates job and additional income
- ♥ Reduces Thailand's dependence on foreign suppliers of agrochemicals
- ♥ Cleans and restores the environment

♥ How to Make Biochar

Biochar machines are inexpensive and easy to make. Warm Heart offers free training sessions and materials for support and guidance.

♥ Where to Use Biochar

Biochar has lots of uses. It can...

- ♥ Fertilize fields
- ♥ Remove pesticide residues from soil
- ♥ Filter water
- ♥ Clean up mine dumps and chemical spills
- ♥ Cook dinner with no smoke and no black pots
- ♥ Feed healthier and fatter animals

♥ Who do I call?

Warm Heart Foundation can answer all of your questions and supply all of your needs.

Call 084-578-4697 to:

- ♥ Request free plans for biochar machines you can make yourself
- ♥ Request free training materials (PowerPoints and videos)
 - ♥ Purchase biochar machines directly from Warm Heart
 - ♥ Schedule free trainings at Warm Heart or your location
